

COVERAGE® G-20

Deposition Aid and Drift Management Agent

20% MORE ON TARGET

For Use With Glyphosate

COVERAGE G-20 is a deposition and drift management agent specially formulated for use with glyphosate-based herbicides labeled for use in agriculture, forestry, roadside, industrial, non-crop, turf, golf course and ornamentals. COVERAGE G-20 generates a more uniform droplet size spectrum which results in enhanced deposition and coverage of the spray on the target surface.

- Specially formulated for use with glyphosate-based herbicides
- Generates a more uniform coverage of the glyphosate on the target surface
- Improves canopy penetration of glyphosate
- Approved for aquatic use (except in WA)

WILBUR-ELLIS®

GENERAL INFORMATION

COVERAGE G-20 is a deposition and drift management agent that reduces the number of spray droplet fines < 100 microns and increases the VMD (Volume Median Diameter) of the spray droplets.

Note: COVERAGE G-20 does not replace the need for additional adjuvants/surfactants in the spray tank.

RECOMMENDED USE RATES

Use 2 fluid ounces per acre of COVERAGE G-20 whenever 16 fluid ounces or less of glyphosate per acre is used.

Use 3 fluid ounces per acre of COVERAGE G-20 whenever 17 - 24 fluid ounces of glyphosate per acre is used.

Use 4 fluid ounces per acre of COVERAGE G-20 whenever more than 24 fluid ounces of glyphosate per acre is used.

COVERAGE G-20 can be added to the spray tank at any time during the mixing process.

When water conditioning products are used, always add the water conditioning product to the spray water first. Any additional surfactants should be added to the spray tank last.

For Aquatic Use (Except in Washington):

COVERAGE G-20 can be used with labeled glyphosate aquatic products. Do not exceed 1 quart of COVERAGE G-20 per surface acre of water.
