**General Information**

NDEMAND Manganese is designed primarily for foliar applications to prevent or correct manganese deficiencies in a wide range of agronomic and ornamental plants. Its use is suggested as a supplement to a regular, balanced fertilizer program to enhance yields and improve quality.

Application of NDEMAND Manganese is a means of obtaining a quick response to needed elements. Foliar applications of NDEMAND MANGANESE may be particularly beneficial during periods of peak nutrient demand, for crops grown on soils having poor nutrient availability or to crops suffering from a weakened root system.

NDEMAND MANGANESE should be used as part of a comprehensive Total Nutrition System® for optimizing plant growth, development, yield and quality.

**Directions for Use**

NDEMAND MANGANESE may be applied as a foliar spray by air, ground concentrate or dilute. Maintain agitation to provide uniform distribution within spray tank. Use of a high quality CPDA approved spreader, such as R-11®, at recommended rates to improve spray dilution. Maintain agitation to provide uniform distribution within spray tank. Use of a high acidic materials.

SPECIAL CONSIDERATIONS: NDEMAND MANGANESE has an alkaline pH and may raise spray solution pH. When tank mixed with materials sensitive to alkaline hydrolysis the use of a buffer or acidifier at recommended rates is advised. Add buffer or acidifier prior to adding NDEMAND MANGANESE. Reducing spray solution pH below 5.0-5.5 may result in precipitation.
